EFFICIENT, GINGIVAL RETRACTION WITH HIGHEST STANDARDS IN HANDLING AND SAFETY

Kulzer launches RetraXil®

“Beautiful retraction” is the slogan for Kulzer’s latest innovation RetraXil and describes the outcome of using the new retraction paste with its special properties: It widens the sulcus, stops bleeding and subsequently leads to more precise impressions. The new retraction paste expands the portfolio of the impression specialist Kulzer and is compatible with analogue and digital impression techniques.

Hanau - 20.09.2021. A challenge for a retraction technique is to find the right balance between good sulcus exposure and minimally invasive application. As a result, a perfect marginal fit ensures both the preservation of the abutment tooth and its gingival and periodontal health.

RetraXil is able to maintain this balance: The new retraction paste is applied via the thinnest-walled cannula on the market. This allows the dentist to access the gingival sulcus very easily. The thin cannula enables precise application of RetraXil and prevents injury to the gingiva.

The high control during the application process corresponds with the high control of soft tissue retraction. Therefore, RetraXil provides a cleanly opened gingival sulcus and ensures beautifully exposed, blood-free preparation margins.

No systemic overdose

Unlike some retraction techniques, RetraXil is ready-mixed and does not contain vasoconstrictors like adrenaline, but rather astringent aluminium chloride. Thus, there is no risk of overdosing.

During the application, the paste is clearly visible due to the blue colour contrast, which ensures good control while rinsing out the paste easily and cleanly without

any residuals. Thanks to the twisting aid, the cannula cannot slip during application and stays securely in place reducing the risk of finger injury.

With fewer work steps compared to other retraction cord techniques users can save time.

For more information on RetraXil, visit Kulzer's website at kulzer.com/retraxil.

Figures

Fig. 1: Beautiful Retraction: The RetraXil® key visual alludes to an exposed single tooth and the clean gap between the preparation margin (of the tooth) and the marginal gingiva. Dental retraction in its most beautiful form – clear and precise.

About Kulzer

As one of the world's leading dental companies, Kulzer has been a reliable partner for all dental professionals for more than 85 years. Whether aesthetic or digital dentistry, tooth preservation, prosthetics or periodontology, Kulzer stands for trusted and innovative dental products. With optimal solutions and services, Kulzer aims to support its customers in restoring their patients' oral health in a safe, simple and efficient way. For this purpose, more than 1400 employees work in 26 locations in the fields of research, manufacturing and marketing.

Kulzer is part of the Mitsui Chemicals Group. The Japanese Mitsui Chemicals Inc. (MCI) based in Tokyo owns 131 affiliates with more than 18,000 employees in 27 countries. Its innovative and functional chemical products are as much in demand in the automotive, electronics and packaging industries as in environmental protection and healthcare.
